PROFESSIONAL SUMMARY

Aspiring Data Scientist with hands-on experience in Artificial Intelligence, Machine Learning, Predictive Analytics, and Advanced Analytics. Skilled in developing and deploying end-to-end AI/ML solutions, performing exploratory data analysis, and delivering actionable recommendations from complex datasets. Experienced in collaborating with cross-functional teams to understand data requirements and solve real-world business problems using data-driven approaches. Passionate about staying up-to-date with the latest advancements in AI and data science.

SKILLS

- **Programming Languages & Databases:** Python, SQL (MySQL), HTML, CSS, JavaScript
- **AI & ML:** Artificial Intelligence (AI), Machine Learning, Advanced Analytics, Predictive Analytics, AutoML (TPOT/Auto-sklearn)
- **Libraries & Frameworks:** NumPy, Pandas, Scikit-learn, XGBoost, SMOTE, Matplotlib, Seaborn
- **Data Analysis:** EDA, Feature Engineering, Data Cleaning, Data Wrangling, Data Preprocessing
- **Data Visualization:** Power BI, Excel, Matplotlib, Seaborn
- **Model Deployment:** Flask, Streamlit
- **Performance & Monitoring:** System Performance Monitoring, Model Evaluation, Cross-Validation, Hyperparameter Tuning
- **Tools & IDEs:** Git, GitHub, Jupyter Notebook, Google Colab, VS Code
- **Mathematics:** Probability & Statistics, Supervised & Unsupervised Learning

INTERNSHIP EXPERIENCE

Data Science Intern | AI Variant

Mar 2025 – Jun 2025

- Developed and implemented machine learning models and algorithms including classification and regression to solve real-world business problems using Python (Pandas, NumPy, Scikit-learn).
- Collected, cleaned, and preprocessed complex datasets for analysis; applied feature engineering and SMOTE-based class balancing to improve model accuracy and robustness.
- Conducted exploratory data analysis (EDA) using Matplotlib and Seaborn; interpreted results to provide actionable recommendations to cross-functional teams.
- Deployed AI/ML models as production-ready web applications using Flask and Streamlit; monitored system performance and model evaluation metrics including Accuracy, F1-score, and ROC-AUC.
- Applied cross-validation, hyperparameter tuning, and advanced analytics techniques to continuously improve model methodologies and prediction accuracy.

PROJECTS

Customer Churn Prediction [GitHub](#)

Tech Stack: Python, Streamlit, Scikit-learn, Pandas, NumPy, SMOTE, Advanced Analytics

- Developed an AI-powered ML model to predict telecom customer churn using 7,000+ records; applied advanced analytics to extract meaningful insights and deliver actionable business recommendations.
- Preprocessed complex datasets by handling missing values, encoding categorical features, scaling, and applying SMOTE to balance classes.
- Achieved 97% accuracy and 86% F1-score; deployed via Streamlit for real-time prediction with system performance monitoring using ROC-AUC, precision-recall, and confusion matrix.

Diamond Price Prediction [GitHub](#)

Tech Stack: Python, Flask, Scikit-learn, Pandas, NumPy, Matplotlib, XGBoost, AutoML

- Built an end-to-end AI/ML application predicting diamond prices; implemented Linear Regression, Random Forest, and XGBoost models with AutoML-inspired pipeline for automated model selection.

- Performed EDA, feature engineering, hyperparameter tuning, and cross-validation; deployed via Flask with real-time prediction and performance monitoring.

Crop Recommendation System [GitHub](#)

Tech Stack: Python, Flask, Scikit-learn, Pandas, NumPy, Machine Learning

- Developed an ML-based crop recommendation system using soil and environmental parameters; collaborated across data collection, analysis, and deployment phases.
- Implemented Decision Tree, Random Forest, and Logistic Regression; interpreted results to provide actionable agricultural insights via Flask web app.

Student Performance Prediction [GitHub](#)

Tech Stack: Python, Flask, Scikit-learn, Pandas, NumPy, Predictive Analytics

- Built a predictive analytics system analyzing demographics and academic factors; performed data ingestion, transformation, and model training to select the best regression model.
- Achieved R^2 score of 0.88; deployed via Flask with real-time prediction interface and system performance tracking.

EDUCATION

2021 – 2025 B.Tech in ECE – Madanapalle Institute of Technology and Science **CGPA: 7.99/10.0**
Relevant Coursework: Data Structures, DBMS, Computer Networks, Statistics, OOP

CERTIFICATIONS

- **NPTEL** – Introduction to Machine Learning
- **IBM** – Python 101 for Data Science
- **Tata Forage** – GenAI Powered Data Analytics Job Simulation
- **GeeksforGeeks** – Complete Machine Learning and Data Science Program
